

At St John's Stonefold CE Primary School, we are rooted in God's love and inspired to nurture, grow and fly. We are committed to delivering a high-quality science education that enables every child to develop knowledge, confidence and curiosity, empowering them to soar as learners of the world God created. Science holds a high profile within our bespoke and innovative curriculum, where pupils are encouraged to explore, question and investigate through engaging and meaningful experiences. Guided by our Christian values—Empathy, Aspiration, Generosity, Love and Endurance (EAGLE)—children learn to work collaboratively, show resilience in enquiry and develop a deep respect for living organisms and the physical environment.

Our carefully sequenced curriculum ensures pupils build secure scientific knowledge alongside strong disciplinary skills. Children learn to explain phenomena, make predictions and understand cause and effect, whilst critically evaluating evidence and applying their mathematical skills through collecting, presenting and analysing data. A strong emphasis on scientific vocabulary enables pupils to articulate their ideas with clarity and confidence. We are committed to providing a broad, balanced and inclusive science curriculum in which every child can flourish, equipping them to become kind, confident and aspirational individuals who are ready to thrive within their community and the wider world with faith and purpose.
